

I am taking part in the British Churchyard Wildflower Survey, and have visited Itchingfield Churchyard in April, July and September of this year. Your churchyard was a real pleasure to survey and was rich in wildflowers, grasses, butterflies, insects etc. It is such a joy to find a churchyard with so many native species of flowers and grasses that are allowed to grow and set seed, and I found 109 different species altogether.

Well done all those who are responsible!

Sylvia Simkin
