

**Coronavirus Risk Assessment for Youth activities (Maximum 15 people in the Hall, 12 in other smaller rooms)**

**Risk Assessment Matrix**

The following tables give a framework for assessing the risks identified, with some guidance to assist you with what a score might mean. The scoring formula used deliberately places additional emphasis on risks with the most severe consequences but are not very likely (by adding 2 x severity to the score) over those that are likely but have limited consequence. This aligns with the most recent best practice in assessment and management of risks.

During the pandemic it is likely that the virus risk before controls are implemented will be scored as 5 (high probability) and 5 (high severity) as the likelihood of a case being observed within 12 months is significant and the consequences are potentially death of an individual or multiple individuals. This goes to emphasise the importance of taking control measures seriously in order to reduce the likelihood and severity of the risk as far as possible.

It is unlikely that the severity score will reduce until such time as there are effective treatments or a vaccine. The control measures you put in place will mostly impact upon the likelihood of occurrence, but you may conclude their impact is sufficient to reduce it below a rating of 5. This does not mean your control measures are not of value because the scoring bands are fairly broad. For example, reducing the likely rate of occurrence from once a week to once every 50 weeks would be a factor of 50 improvement in likelihood but still have a score of 5.

Likelihood / Probability
5. Likely to occur at least once in any 12-month period
4. Likely to occur at least once in a 3-year period
3. Likely to occur at least once in a 10-year period
2. Likely to occur at least once in a 50-year period
1. Unlikely in a 50-year period

Severity / Significance / Consequence
5. Expected to result in church closure or significant harm to multiple individuals, death of an individual
4. Material threat to continued existence of church, or significant harm to single individual
3. Substantial adaptation required to ongoing operations
2. Minor adaptation required to ongoing operations
1. Inconvenience to ongoing operations

RISK / PRIORITY INDICATOR MATRIX						
LIKELIHOOD / PROBABILITY	5	7	14	21	28	35
	4	6	12	18	24	30
	3	5	10	15	20	25
	2	4	8	12	16	20
	1	3	6	9	12	15
		1	2	3	4	5
SEVERITY / SIGNIFICANCE / CONSEQUENCE						

Score = (Severity x Likelihood) + (2 x Severity)  
 (this formula places additional emphasis on high severity issues)
