

A vibrant, multi-colored star field with blue, white, and red stars against a dark background. The stars are scattered across the frame, with some appearing as bright, distinct points and others as faint, diffuse clouds. The colors range from deep blue to bright white, with some reddish-orange hues interspersed. The overall effect is a rich, multi-colored stellar population.

Space – Project in a Day

Planet Fact file

Research the planets in the milky way and make your own mini-book or fact file about the different planets!

Planet Fact Sheet

Planet name _____

Distance from the sun _____

Neighboring planets _____

Number of moons _____

Weather report _____

Other information that you found interesting _____

Space Art

Can you use collage, or an art method of your choice, to make your own space picture?

OUTER SPACE
Collage

Rocket creation and experiment

Using an old toilet roll tube (or kitchen roll) can you create your own rocket...

Challenge yourself to see how far your rocket can travel when thrown – is it better indoors or outside? Can you measure the distance travelled? Does it help if you add weight in the nose of the rocket (I find blue tac works brilliantly)?

Planet order mnemonic

Can you come up with a special phrase to help you remember the order of the planets using their start letter?

M V E M J S U N P
