

## A Christian Guide to Environmental Issues

Martin J. Hodson & Margot R. Hodson

If you are trying to make informed changes or gain a deeper understanding of environmental concerns there is no better option than to listen to experts. Environmentalists Martin and Margot Hodson draw upon their professional experience to give Christians an awareness of the problems, which will help inform their choices and facilitate an engagement with the issues. In their new book they share stories of hope and encouragement to point to a positive way forward.

A range of issues that affect our world are examined, such as biodiversity, climate change, energy, water, soil, food and human population and consumption. The authors share observations and stories from their own travels that expose the problems yet also highlight local solutions from which much can be learnt.

Each chapter comes with a practical ECOtip to enable readers to make realistic changes, a biblical reflection on the theme, study ideas and questions that small groups can explore together. Leader's notes facilitate group sessions. An extensive bibliography allows for further reading and study. The breadth of content gives informed engagement that has practical outworking and allows for a faith-based response, bringing the wisdom of the Bible into the world today.

*...This book is a comprehensive guide to some of the ways forward we must take. It is accessible, practical, even hopeful, and its biblical wisdom means it is indeed a Christian guide to environmental issues.* Peter Harris, Founder of A Rocha
