

Title:	40 Reasons to Trust the Bible		Paperback
Author:	Martin Johnson, Jamie Austin, Kate Wiltshire		RRP: £11.99
			ISBN: 978-1-78815-673-8
			Size: 234 x 156 x 20 mm
Type:	Teaching	Pub. Year:	2018
Features:	Over 40 photographs and maps	Pages:	274

Compelling Evidence for the Bible's Authenticity!

About the Book

The Bible is the most remarkable book in the world. Written over a period of several millennia and completed almost 2,000 years ago, its message still influences the lives of billions of people across the globe today. But can the Bible really be relied upon? Does modern science support or deny the accuracy of the ancient texts?

Martin Johnson, Jamie Austin and Kate Wiltshire discuss 40 diverse topics, each investigating a different aspect of the Bible's authenticity, from history to genetics, geology to archaeology, and the reliability of the texts to the accuracy of the prophecies. They convincingly demonstrate that the Bible is indeed reliable in respect to its factual claims, and provide ample links to further resources for the reader who wants to dig deeper.

About the Authors

Martin Johnson retired as the Director of the Thalidomide Trust in 2014. He has gained degrees in Divinity (BD), Management (PhD), and Behavioural Science (MSc). He has published several research and professional papers in Management, Medical, and Psychology journals, ranging from the founding and development of the Modern Hospice Movement to advanced theories of organisation, and managing rare diseases. He has lectured at Kings College London and Warwick Business School on management theory, and at the Royal Society of Medicine.

Jamie Austin is a Chartered Geologist with over 19 years' experience in geotechnical and geo-environmental consultancy. He has a BSc in Geology from Royal Holloway, London and a Masters in Mining Geology from Camborne School of Mines for which he spent three months in central Zimbabwe mapping and prospecting banded ironstone deposits for gold. Since graduating he has worked as a geo-environmental and geotechnical engineer with experience ranging predominantly across the UK and Ireland, but he has also undertaken work in Sierra Leone, Iran, Egypt, Mexico, France and the United Arab Emirates.

Kate Wiltshire is a Veterinary Surgeon (MRCVS) who qualified at the Royal Veterinary College in 1996 with B VetMed. Since that time, she has worked in small animal practice, treating dogs, cats and what are known in the trade as 'small furrries' (rabbits, guinea pigs, other rodents and even the occasional hedgehog and sugar glider). As a professional who has treated a large number of very different types of animal, Kate is convinced that the complex interplay of biochemical, physiological, anatomical and neurological forces that enable life from conception to adulthood and ultimately death could not possibly have arisen by chance.

Promotional Events

1. Feb 18. Author presentation in **Hemingford Grey**, Cambridgeshire.
2. Nov 17. Author presentation in **Quadring**, Lincolnshire.
